

Data sheet

Electric operated valves

Type CCM for R744 / CO₂

The CCM is an electrically operated valve designed specifically for operation in CO₂ systems. The valve is capable of functioning both as an expansion valve, and as a gas bypass valve with back-pressure regulation in subcritical applications.

The pressure rating allows for operation in environments where system standby capability is required without the need for auxiliary cooling systems during servicing or power outages.

Features

- Up to 90 bar (1305 psi) working pressure to accommodate CO₂ system pressures during standstill conditions.
- Precise positioning for optimal control of intermediate pressures in transcritical CO₂ systems or liquid injection in heat exchangers.
- MOPD up to 50 bar (725 psi).
- Combined stainless steel butt weld/solder connections for installation in copper piped systems (K65 alloy or standard) as well as steel piped systems.
- Standard M12 connector for simple and flexible connection to the motor driver.
- For manual operation and service of the CCM an AST-g service driver is available. For further information please contact Danfoss (Commercial Refrigeration and Air Conditioning Controls).
- *UL recognized.*

Data sheet | Electrically operated valves for CO₂, type CCM

Technical data

Parameter	CCM
Compatibility	R744
MOPD	50 bar (725 psi)
Max. working pressure (PS/MWP)	90 bar (1305 psi)
Refrigerant temperature range	-40°C to 60°C (-40°F to 140°F)
Ambient temperature	-40°C to 60°C (-40°F to 140°F)
Material of construction	Stainless steel

Electrical data

Parameter	CCM
Motor enclosure	IP 67
Stepper motor type	Bi-polar - permanent magnet
Step mode	2 phase full step
Phase resistance	52Ω ±10%
Phase inductance	85 mH
Holding current	Depends on application. Full current allowed (100% duty cycle)
Step angle	7.5° (motor), 0.9° (lead screw), Gearing ratio 8.5:1. (38/13) ² :1
Nominal voltage	(Constant voltage drive) 12 V dc -4% +15%, 150 steps/sec.
Phase current	(Using chopper drive) 100 mA RMS -4% +15%,
Max. total power	Voltage / current drive: 5.5 / 1.3 W (UL: NEC class 2)
Step rate	150 steps/sec. (constant voltage drive) 0-300 steps/sec. 300 recommended (chopper current drive)
Total steps	CCM 10, 20, 30 2625 [+160 / -0] steps CCM 40 3530 [+160 / -0] steps
Total stroke	13 mm / 16 mm (0.5 in. / 0.6 in.)
Full travel time	CCM 10, 20, 30 17 / 8.5 sec. (voltage / current) CCM 40 23 / 11.5 sec. (voltage / current)
Lifting height	CCM 10, 20, 30 13 mm (0.5 in.) CCM 40 16 mm (0.6 in.)
Reference position	Overdriving against the full close position
Electrical connection	4 wire 0.5 mm ² (0.02 in ²), 0.3 m (1 ft) long cable

Accessories:

M12 angle cable

M12 angle female connector is intended for use with a standard M12 male connector, available on stepper motor valves.

This cable is designed to offer high flexibility and small outer diameters with tensile strength. The angle way M12 cable consist of paired, twisted wires, which decreases mutual influence between signals transmitted along the cable and reduces influence of external sources of interference. The cables thus provides a higher degree of protection against lost steps compared to other cables.

Approvals

Specification

Jacket	PVC - black
Cable outer sheath	Oil - resistant
Water proof rating	IP 67
Operating temperature range	-40 – +80 °C
Wire type	Twisted pair, cross section 20 AWG / 0.5 mm ²
Cable outer diameter	7.0 mm
Minimum bending radius	10 x cable diameter
Cable combustibility / test	Flame retardant / VW-1 / CSA FT - 1
M12 standard	EN 61076-2-101
Reference standard	UL style 2464 and DIN VDE 0812
LVD directive	73/23/EEC and 93/68/EEC

Valve operation

The CCM can be used in a variety of applications within CO₂ refrigeration systems. Typically it is

used as a gas bypass valve in a transcritical CO₂ booster system or as an expansion valve.

Application 1

A gas bypass valve is typically used to regulate the intermediate pressure in a transcritical CO₂ refrigeration system. By venting flashgas generated after the transcritical expansion, the pressure can

be kept at a safe level for all components situated in the liquid lines of a transcritical CO₂ system. For use in the gas bypass application the EKC326A controller is recommended.

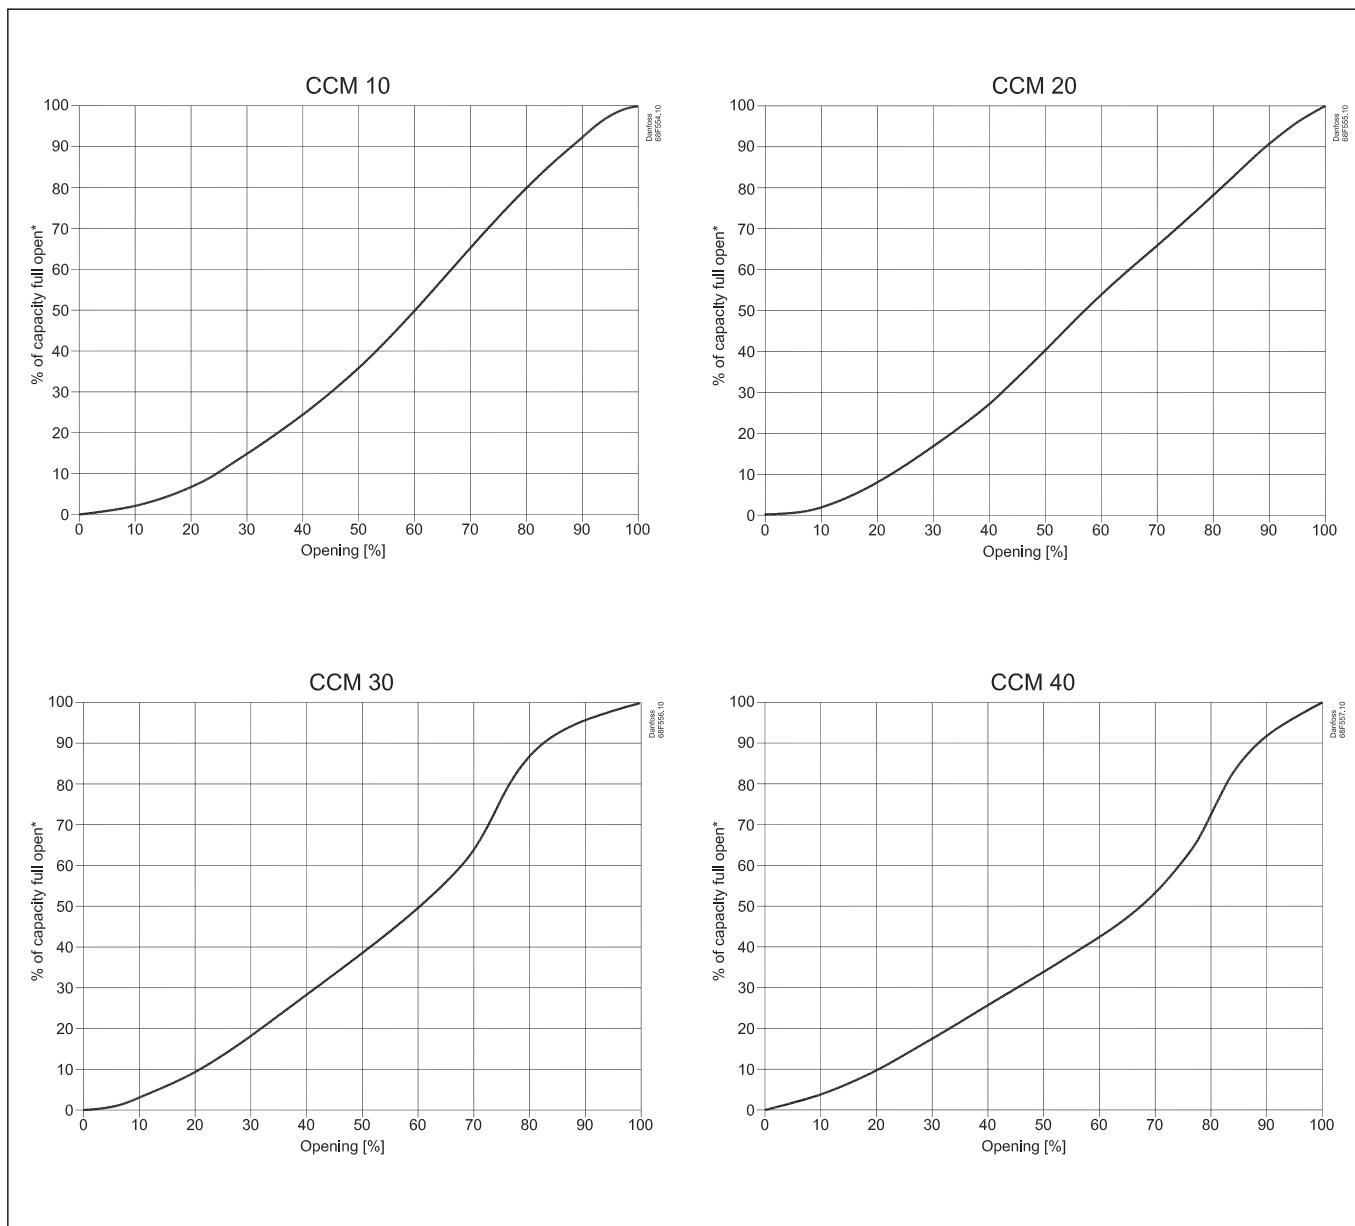

Application 2

A liquid expansion valve is typically used for injection in plate heat exchangers of CO₂/CO₂ cascades, or as an expansion valve for CO₂ evaporators. For the

liquid injection applications CCM is used with EKC 316A controller.

Valve operation (Cont.)

Sizing and capacities

The following tables indicate nominal capacities of the valve in the gas bypass application and in the liquid expansion application with R744 (CO₂) as refrigerant. Capacities are given for varying operating conditions within the normal range

of the valve. If the capacity shown in the table is higher than 75% of the required capacity, then it is recommended to use a valve one size larger, or as an alternative, to use an additional valve in parallel.

Data sheet | Electrically operated valves for CO₂ type CCM

Gas Bypass Application

The capacities shown are based on the amount of flash gas produced when expanding from supercritical CO₂ before the transcritical expansion valve (ICMTS) at 35°C and the corresponding

optimal high pressure setting (89 bar) as set by the Danfoss EKC326A controller. The capacities shown are the total system evaporating capacity at the given evaporating temperature.

Liquid Expansion Application

Valve capacities when operating as an expansion valve are given in the following table for different evaporating temperatures (t_e) and varying pressure differences over the valve. The values shown are based on 0.1 K liquid subcooling at the inlet to

the valve and no useful superheat. Capacities can be adjusted for different levels of subcooling by multiplying the capacity found in the table below, by the capacity correction factor found in the subsequent table.
