

## Ultrasonic level transmitter, non-contact

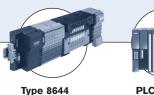

- Compact for level measurement up to 15 m
- 4...20 mA/Hart 2 wires
- Suitable for solids

Type 8178 can be combined with...

Type 6213

PI-controller on valve

SideControl

Type 2712 (8630)

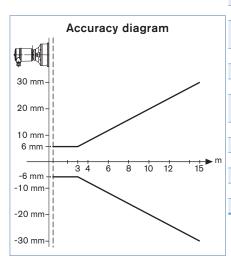

Continuous TopControl system

Valve islands

The Type 8178 is a non-contact ultrasonic level transmitter, designed for continuous level measurement in open or closed vessels. The unit is suitable for liquids, but also for solids, in virtually all industries, particularly in water and waste water management.

### General data

Materials			
Housing	PBT, Stainless steel 316L (1.4435)		
Cover	PC		
Seal ring / Ground terminal	NBR / Stainless steel 316Ti/316L (1.4571/1.4435)		
Mounting strap	UP		
Wetted parts			
Process fitting / Transducer diaphragm	Stainless steel 1.4301 / Stainless steel 1.4571		
Process seal	EPDM		
Display	LCD in full dot matrix		
Process fitting	Mounting strap		
Max. torque mounting boss	25 Nm		
Electrical connections	Cable gland M20 x 1.5		
Measuring type	Distance between lower edge of the transducer and		
	product surface		
Dead zone	0.6 m		
Measuring range	0.6 up to 15 m (for liquids)		
	0.6 up to 7 m (for solids)		
Process temperature	-40 up to 80°C		
Vessel pressure	0 bar (0 kPa - because no sealing possibility)		
Vibration resistance	Mechanical vibrations with 4.g and 5100 Hz		
Temperature coefficient	0.06%/10K (Average temperature coefficient of the zero signal		
	- temperature error)		
Resolution	max. 1 mm		
Ultrasonic frequency	35 kHz		
Interval	> 2 s (dependent on the parameter adjustment)		
Beam angle at - 3 db	3 degrees		
Adjustment time	> 3 s (dependent on the parameter adjustment)		
Accuracy	< 0.2% or ± 6 mm (see diagram)		

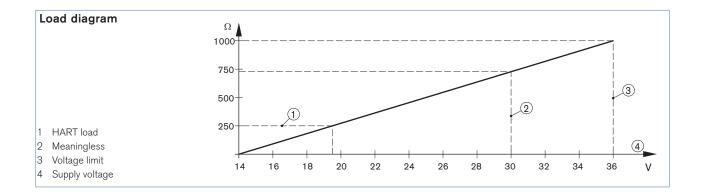

Electrical data			
Power supply	14 to 36 V DC		
Permissible residual ripple	< 100 Hz: U <sub>ss</sub> <1 V 100 Hz10 kHz: U <sub>ss</sub> <10 m V		
Output signal	420 mA/HART		
Resolution	1.6 μΑ		
Fault signal	current output unchanged; 20.5 mA; 22 mA < 3.6 mA (adjustable)		
Current limitation	22 mA		
Load	see load diagram		
Integration time (63% of the input variable)	0999 s, adjustable		
Fulfilled NAMUR recommendation	NE 43		
Environment			
Ambient temperature with display, adjustment elements	-20 up to +70°C (operation and storage)		
Relative humidity	45-75 %; non condensated		
Standards and approvals			
Protection	IP66/IP67 with M20 x 1.5 gland mounted and tightened		
Overvoltage category	III		
Protection class	Ш		
Standard EMC	EN61326		

EN61010-1

NE 21; NE 43

## Principle of operation

Security

NAMUR

The transducer of the ultrasonic sensor emits short ultrasonic pulses, at 35 kHz to the measured product. These pulses are reflected by the product surface and received by the transducer as echoes. The running time of the ultrasonic pulses from emission to reception is proportional to the distance and hence to the level. An integrated temperature sensor detects the temperature in the vessel and compensates the influence of temperature on the signal running time. The determined level is converted into an output signal and transmitted as an measured value.

## Target applications with Type 8178

Continuous level measuring for fluids and solids.

## Open basins

A typical application for the 8178 ultrasonic transmitter is level measurement in open basins. Products such as rain water or sewage water, i.e. with impurities. Here is where the advantages of non-contact measurement with the 8178 come into their own: simple and maintenance-free. The degree of pollution of water or an accumulation of mud in the basin is not important, because the 8178 transmitter measures the surface.

## Sludge container

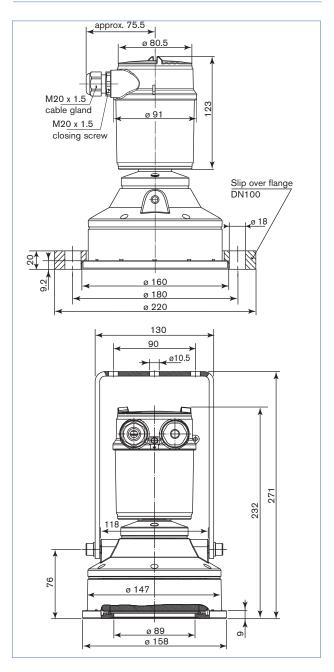

In sewage treatment plants, the accumulated sludge is dewatered and transported via conveyor belts to containers. The 8178 transmitter measures the filling of the container. An empty container can thus be readied in good time before the max. level is reached.
