## Knife gate valve WB12

Stafsjö's knife gate valve WB12 is bi-directional tight and can therefore be installed into a pipe system independent of pressure direction. A square flanged valve body with integrated flange gaskets makes it easy to install and also allows end-of-pipe installations. WB12 has a full bore with no cavity which gives excellent flow characteristics, and this makes it suitable for fluids, sludge and liquids with solids in suspensions such as water, sewage and bio mass.

WB12 has a robust epoxy coated valve body in cast iron. Its extended face-to-face and square flanges enable easy replacement of other bonnet type valves. It is equipped with a gate in stainless steel, which has a polished edge in order to minimize friction and to lower required operation force. The valve is supplied with a one piece moulded sealing profile in either Nitrile or EPDM, whose steel core support and maximizes its service life. The gland box is equipped with Stafsjö's box packing TwinPack™, to secure that no media reaches the surrounding environment. A box bottom scraper, which is standard on DN 200, prolongs the box packing braids' service life. The valve is modular designed and it can easily be supplied with different types of actuators and accessories.

The WB12 valve is designed, manufactured, inspected and tested according to the European Pressure Equipment Directive (PED 97/23/EC) category I and II module A1. The valve is CE marked when it is applicable.

Other WB version beside the WB12, is the WB11 and fully lugged WB14 which both are available up to DN 300. The WB11 is also available with additional tapped holes for square flange connection. The WB is available from DN 350 up to DN 1200.

### Excellent flow characteristics

A straight bore with a sealing profile in level with bore, gives minimal pressure losses since the media can pass it practically unnoticed.

### Fully lugged and simple to install

Bi-directional sealing, square flanges with extended face-to-face and integrated flange gaskets makes it very easy to install and to replace other bonnet type valves. The valve flanges also enable end-of-pipe installations.

### First-rate sealing capacity

A gland box supplied with three layers of our TwinPack™, which is specially developed and made for Stafsjö's valves, secures that no media reaches the surrounding environment.

## Specify the Stafsjö valve

Stafsjö's valves are modular designed and they can easily be customized with gate, sealing profile and box packings according to media and requirements, as well for actuators and accessories. Below are examples of how you can specify your Stafsjö valve. Further information is available on [www.stafsjo.com](http://www.stafsjo.com).

Alloy must be specified if it differ from standard.

<sup>3)</sup> All electronics must be specified in detail.

ILS: ifm electronic IG0006

SV: Parker Numur valve G1/4", 5/2, 220 V AC
