Knife gate valve SLV

Stafsjö's knife gate valve SLV is a full bore valve particularly suitable for the most abrasive and demanding slurry where operation reliability and low life cycle cost are emphasized.

When the valve is in opened position, the seats form a tight extension of the pipe line and no metal parts are in contact with the media. When the valve closes the two seats are displaced axially forming a seal with the gate until it forms a complete closure – 100% tight in any pressure direction.

The SLV comes with a coated lugged valve body in nodular iron with integrated purge ports in the lower end to be utilized if a bottom cover is assembled on the valve. The unique seats are available in low friction special EPDM, natural rubber or Viton. These seal against a gate in duplex stainless steel specially machined and grinded to reduce the friction when the valve is operated. It can also be supplied hard chromed to give a really hard and wear resistant surface. The gland box system is as standard supplied with three layers of our TwinPack™ and a box bottom scraper in order to give a first-rate sealing and a straight gate guidance.

The top works is modular designed and there are several actuator types and accessories to choose from in our standard collection – all easily exchangeable between each other. For security reason the valve is always supplied ready to be locked in either opened or closed position.

The SLV valve is designed, manufactured, inspected and tested according to pressure equipment directive 2014/68/EU category I and II module A2. The valve is CE marked when it is applicable.

Other slurry valves are the fully flanged SLF and the high pressure versions SLH and SLX which can be supplied for pressures up to 50 bar.

A precise gate guidance extend the valve's service life

A solid top works (1), a robust gland box system (2), precisely machined gate supports (3) is crucial during operation to keep the gate in position and to minimize the wear on the seats.

Built in steel reinforcements improve the performance

The front reinforcement rings (4) ensure the seats shape, position and strength remain during operation while the flange sealing reinforcements (5) secure a tight and exact position of the seats towards the gate and connecting flanges.

Integrated expansion areas give low operating force and minimize the stress on the seats

The seat entrance area (6) is designed to give a smooth gate entry and the expansion areas (7) allows the seat to be axially flexible requiring minimal operating force.

Design data

Sizes	Flange drilling	Face-to-face dimension	Corrosion protection
DN 50 - DN 900	EN 1092 PN 10 AS 2129 Table D AS 2129 Table E ASME/ANSI B16.5 Class 150, ASME/ ANSI B16.47 Class 150 series A	Stafsjö manufacturing standard	Non-corrosive resistant materials are coated in colour RAL5015 acc. to Stafsjö's standard, which fulfill the requirements in EN ISO 12944 class C3.

Other sizes, flange drillings and corrosion protection on request.

Leakage rate	Pressure tests
EN 12266-1:2009 Rate A: no visually detectable leakage is allowed for duration of the test.	Pressure tests are performed with water at 20° C according to EN 12266-1:2009. Pressure shell test: 1,5 times maximum allowable working pressure for open valve. Pressure seat tightness test: 1,1 times maximum allowable differential pressure for closed valve.

Maximum working pressure body at 20°C		Maximum differential pressure at 20°C	
DN	bar	DN	bar
50 - 600	10	50 - 400	10
700 - 900	5	450 - 600	6 (10 bar on request)
		700 - 900	5

Basic equipment

The table above gives recommended cylinder sizes at normal operation with 5 bar air pressure. For other operating conditions, please contact Stafsjö or your local representative for advice.

Electric motors are mounted according to standard ISO 5210. The table above gives recommended motor sizes at normal operation. For other operating conditions, please contact Stafsjö or your local representative for advice.

The actuators are described in separate data sheets. For advice and information on other actuators or on ATEX-classified ones, please contact Stafsjö or your local representative.

Specify the Stafsjö valve

Stafsjö's valves are modular designed and they can easily be customized with gate, seats and box packings according to media and requirements, as well for actuators and accessories. Below is an example of how you can specify your Stafsjö valve. Further information is available on www.stafsjo.com.

³⁾ All electronics must be specified in detail.

Part list

Pos.	Part	Material (type)
1	Hand wheel	Coated cast iron Ø 315 (EN-JL1040 (GG25)) ≥ Ø 400 (EN-JL1030 (GG20))
2	Yoke	Coated steel (EN 1.0038)
2a	Bearing	Iglidur XTM
2b	Slide washer	Brass (CW614N)

A⁷⁾ Bore diameter. A⁸⁾ Inlet diameter.

B⁹⁾ Minimum required face-to-face for installation without load distribution rings. B¹⁰⁾ Installed face-to-face without load distribution rings.

B¹¹⁾ Installed face-to-face with load distribution rings (LDR). When the pipe line or connecting flanges are rubber lined or when they do not cover the metal frame around the seats (dimension C), there is a need to install load distribution rings between the SLV and the flanges to avoid functional problems and to ensure the seats will stay in correct position after every valve manoeuvring. If load distribution rings are ordered they are as standard assembled on the valve upon delivery.

¹²⁾ Weight in kg for valve including hand wheel with rising stem (HWR), ≥ DN 450 prepared for bevel gear or electric actuator.

Main dimensions are only for information. Contact Stafsjö for certified drawings.
